OJ13 Kwoma OJ13

224 strangled by hand or are snared by means of a running noose
[857] tied to the end of a stick. A man sometimes constructs a small deadfall trap in the granary or dwelling to catch stray rats, but more frequently he sets a hunting dog on these pests.

224 If a man does not use a bow and dart or spear to kill small
262 animals, the belief about his blood does not strictly apply.
[826] He may eat them without harm. Many Kwoma, however, do not take the chance of eating something which has been killed even in this way, and give the meat to some other member of their family.

224 Opossums and birds of paradise are exceptions to the
703 lack of interest in small game. A man may expend consider-
237 able effort hunting these, not because of their food value, but
223 because they yield homicidal insignia. A man who has taken the head of an enemy is permitted to wear a band of opossum fur on his forehead and bird of paradise plumes in his comb. Hence a man who already has the privilege of wearing such insignia eagerly seeks them, and one who does not yet have the privilege seeks them to use in the future or to give to a *brother* or *uncle*.

252 Processing sago is a continual chore for Kwoma adults of
593 both sexes. The technique which they master during adoles-
885 cence has been described in the preceding chapter. The only change which occurs at adulthood is that the work group is composed of a man and his wife rather than of a brother and
[439] his sister. The habits of processing sago are maintained by
[476] the family's need for an everyday supply of sago flour, for a surplus to be traded with the river people for fish, and for
[796] contributions to necessary work bees and ceremonial feasts.

226 An adult woman continues to fish as she did during her
462 adolescence and childhood. Since marriage is patrilocal, she
[591] fishes in a new locale with the women of her husband's hamlet.
[433] The main fish supply comes from trade; consequently fishing
[487] is only a supplementary occupation in an economic sense and is engaged in primarily for recreation.

• 222 A woman supplements the larder with edible produce from
462 the forest. She collects the leaves of certain wild trees for use as greens; she searches in the dead butts of sago palms for

the grubs, which are considered a delicacy roasted; and she picks up the windfalls from edible varieties of wild fruit trees. These are subsidiary economic tasks for the woman, but, if she neglects them, her husband will criticize her. Her own wish for these additions to her diet also provides a motive for this work.

A woman continues during adulthood to perform many of the tasks that she learned during childhood and adolescence. She is responsible for keeping the household supplied with firewood and water until she has daughters old enough to take over this work. It is her duty to build the fire in her hearth, to plan and prepare the midday meal, and to keep on hand a supply of sago briquettes. Her husband sees to it that she performs these wifely duties, criticizing and even beating her if she is unduly lazy or negligent.

The men and women of a family share the responsibility of caring for the domesticated animals. It is the man who captures wild pigs whenever he spears a sow with a litter. After he brings them home, he tethers them to stakes near the house, where his wife and children feed them sago pulp mash until they are habituated to the dwelling; then he allows them to go free and forage for themselves. The wife has the responsibility of feeding them whenever they return to the dwelling or calling them to be fed if they stay away for more than a day. Special care is taken of a pregnant sow. Husband and wife coöperate in watching her so that they can catch and tame the offspring before they run wild. The man castrates all male pigs because it is believed that boars cannot be domesticated. The litters born to domesticated sows are therefore sired by wild boars. A domesticated pig is speared and butchered and its flesh used in the same manner as wild pigs, and the same taboo against eating its flesh applies to the man who kills it.

One or more dogs are attached to every Kwoma family. Each dog is individually owned, and is fed and cared for by his master or mistress. Some dogs are trained for hunting. To do this a man must teach the dog to follow pig tracks in the forest but not in the hamlet, for if a man's dog chases and

619 The land (both mountain and surrounding sago swamp) of the Hongwem
423 people is divided into various large sections which belong to either
631 Wanyi, Haymakwo, or Tug. These sections are not contiguous, and are
614 specifically bounded by marked trees, rocks, streams, etc. These sections
are further divided into subsections owned by brother, real or classificatory.
[428] Land is passed on to son, or brother's son or mother's brother's son.

241 From this land, the people, working in family groups, get a living.
[262] There are two food products which stand far above all others in dietary
[462] importance, sago and yams. Both sexes and the children work in the planting,
cultivation, and harvesting of these crops, but only men can wash the sago
pith and plant the yams. There is no season for this or for any other of the
food products. Yams are planted on the steep side hills, the tops of
trees first being lopped off and burned. The breaking of the ground is done
with a digging stick. Dry taro, coconut, spinach, banana and recently
222 corn and melons are also cultivated. Beside these food products the leaves
262 of several wildgrowing trees and shrubs, and various berries are eaten.

224 Hunting is quite secondary. Pigs which are the most important of hunted
[796] animals are usually speared only in preparation for a feast, or, if
killed at other times call for a special pig-eating feast.
[223] Cassowarys are also killed by spearing, but to bag one is a rare event.
Smaller birds are very rarely shot with a bow and arrow. Snakes and
[857] lizards are a delicacy supplied by the young boys who either shoot them
222 with a bow and arrow or club them. A large grub which feeds on the sago
palm is a particular delicacy. Neither a man nor his parents may eat the
262 yams he has planted or an animal or bird he has killed. It is thought
826 that the man's blood goes into these food products, and that a man, eating
439 his own blood will die. Fish are obtained by trade and a few caught. Pigs
226 and dogs are domesticated.
